

POLICE FORCE ROAD SAFETY DASHBOARD

Greater Manchester Police

This dashboard analyses both collisions and the drivers involved in them on the roads in Greater Manchester. It also uses national figures to allow a comparison of road risk against typical values seen elsewhere in Great Britain and produces a 100-based index for comparison purposes. Figures above 100 indicate a higher rate than the Great Britain average and the opposite is true for values below 100. Comparisons are based on traffic levels within each force area. Collisions involving casualties of all severity are used in the analysis, although there may be a differentiation for the most serious collisions where someone is killed or seriously injured.

Collision Index

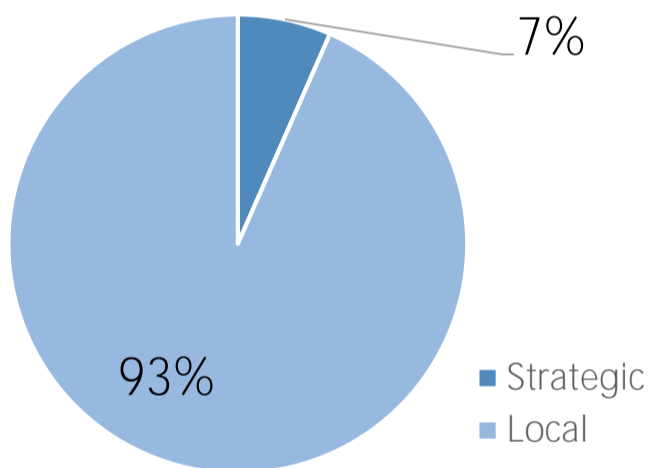

The collision rate per mile travelled is 16% lower than the national average

Collisions per Year

Collisions - Strategic vs Local Roads

Collisions by Speed Limit

Injury Collisions Involving (100 = national average, <100 = lower than average, >100 = higher than average)

Drink Driving
159 drivers per year

Mobile Phone
13 drivers per year

Speeding
158 drivers per year

Red Light
124 drivers per year
